

Botanical Name: Aeonium cuneatum

Common Name: Giant aeonium

Type of Plant: dicot: perennial Family Crassulaceae

Habit of Growth:

Overall Shape clumping, sprawling succulent forming large rosettes of
of foliage close to the ground; becomes thick and congested

Height to 4 ft. Spread to 4 ft. Growth Rate moderate

Environment:

Exposure outdoors full sun to partial shade

Soil prefers a soil with good drainage

Hardiness some frost (zones 15-17, 20-24)

Morphology:

Leaves to 10" long, oblanceolate to cuneate, light green with rosy
margins when young; form large 'dinner plate' rosettes to 18" across

Flowers terminal spikes, golden yellow, to 18" long; in early spring

Fruit tiny capsule

Propagation: stem cuttings

Usage: often used in containers or in succulent gardens; appreciated
for large rosettes and flowers; very unique, 'other-worldly' appearance to foliage
and flowers

Landscape Care:

Watering prefers occasional deep watering; fairly drought tolerant when
well established

Fertilizing slow-release in spring

Pruning head back long stems if dense plant is desired

Pests/Diseases root rot in slow-draining soils

Other

Origin: Canary Islands
