

Botanical Name: Grevillea 'Noellii'

Common Name: Noell's grevillea

Type of Plant: dicot; shrub Character evergreen

Habit of Growth:

Overall Shape irregularly upright, spreading, shrub with slender, arching
branches; erect to sprawling, forms a loosely rounded canopy with fine textured
needle-like foliage which resembles Juniperus conferta

Height 3-5' Spread equal Growth Rate moderate

Environment:

Exposure outdoors prefers full sun, tolerates partial shade

Soil prefers well draining loam, avoid poorly draining clay

Hardiness hardy (zones 8,9, 12-24); thrives near coast

Morphology:

Leaves pinnate, alternate-whorled, linear, 3/4 to 1" more long,
bright green, glossy, revolute margins

Flowers pinkish white, lacks petals, sepals united in curved
tube, 1/2" long, mostly short, terminal racemes -- spring

Fruit 1/8" long follicle

Propagation: semihardwood cuttings

Usage: small-medium filler for conifer like appearance, fine
textured foliage, raised planters, slopes, informal mass plantings

Landscape Care:

Watering prefers regular, tolerates short drought, avoid heavy
lawn watering

Fertilizing balanced in spring, iron for chlorosis

Pruning none -- selectively head back lightly to promote dense form

Pests/Diseases relatively free

Special Conditions

Origin: hybrid Family: Proteaceae
