

Botanical Name: Anemone japonica (A. hybrida)

Common Name: Japanese anemone

Type of Plant: Dicot: perennial Character evergreen

Habit of Growth:

Overall Shape upright, clumping graceful perennial with palmate foliage
and flowers held on long stems above the foliage; spreads quickly by runners
and offsets after established

Height 2 to 3' Spread 2 to 3' Growth Rate moderate

Environment:

Exposure outdoors does best in part shade; takes sun near coast

Soil likes moist, well-drained soils

Hardiness hardy -- all zones

Morphology:

Leaves Simple palmate becoming trifoliate with large palmate
leaflets to 3" across; young leaves somewhat hairy; forms long petioles

Flowers daisy-like flowers in pink, white or rose, to 2" across
flowers form in clusters above the foliage in fall or early winter

Fruit small capsule

Propagation: division

Usage: good source of fall color in partial shade areas; works
well in front of tall shrubs or under trees; good in temperate climate
landscapes

Landscape Care:

Watering likes regular watering; not especially drought tolerant;
avoid heavy watering in poorly drained soils

Fertilizing balanced fertilizer in spring

Pruning remove spent flowers; divide as needed in fall or spring

Pests/Diseases root rot in heavy soils

Special Conditions may become weedy in some gardens

Origin: Hybrid; Japan Family: Ranunculaceae
