

Botanical Name: Juniperus horizontalis 'Prince of Wales'

Common Name: Prince of Wales juniper

Type of Plant: conifer: groundcover Character evergreen

Habit of Growth:

Overall Shape prostrate, wide spreading juniper, branches nearly flat
from base to form a low, mat-like shape, branchlet tips not sharp

Height 6" - 9" Spread 3' - 4' (6') Growth Rate slow

Environment:

Exposure outdoors full/partial sun

Soil prefers well draining; tolerates most

Hardiness hardy: best in warm, sunny habitats (all zones)

Morphology:

Leaves tiny, overlapping scales, dull green turning somewhat
purple in colder areas

Flowers none

Fruit none

Propagation: semi-hardwood cuttings

Usage: excellent juniper to use as a groundcover or low facer -

for very prostrate habit - rock gardens, slope plantings; may show sunburn
in hot, dry locations

Landscape Care:

Watering prefers occasional deep soak, tolerates regular if
drainage is good

Fertilizing balanced in spring

Pruning none; selectively tip to keep in bounds

Pests/Diseases spider mite, juniper twig borer

Special Conditions

Origin: cultivar Family: Pinaceae
