

Botanical Name: Geranium incanum

Common Name: No common name

Type of Plant: dicot: perennial Family Geraniaceae

Habit of Growth:

Overall Shape spreading, mounding groundcover with fine-textured foliage
and a soft-looking habit; flowers freely along growing stems; very aggressive

Height to 1 ft. Spread indefinite Growth Rate rapid

Environment:

Exposure outdoors full sun; prefers warm conditions

Soil tolerates any soil with good drainage

Hardiness some frost: zones 14-24

Morphology:

Leaves very finely palmatifid; leaves to 2" across, blade segments
less than 1/16" across; green above, white-hairy beneath

Flowers magenta flowers in summer through fall; flowers form in
loose umbels; individual blossoms to 1/2" across

Fruit small capsule with few seeds

Propagation: seed, stem cuttings

Usage: use as an aggressive groundcover in warm sunny beds; good in
open areas; can over-run other perennials and annuals; use with caution; fine
foliage and regular blooming make this a good groundcover for large areas

Landscape Care:

Watering takes average watering

Fertilizing balanced fertilizer in spring

Pruning shear back every 2 years to keep neat

Pests/Diseases none significant

Other

Origin: South Africa
