

Botanical Name: Convolvulus cneorum

Common Name: Bush morning glory

Type of Plant: dicot: shrub Character evergreen

Habit of Growth:

Overall Shape upright, many stemmed from near base to form a loose,
rounded canopy

Height 2' - 4' Spread equal Growth Rate rapid

Environment:

Exposure outdoors full sun

Soil well draining, fairly dry soils

Hardiness some frost, zones 7-9, 12-24

Morphology:

Leaves pinnate, alternate, oval-oblong to obovate, 1" - 2" long,
pale silvery gray green, silky to the touch

Flowers white, 1" - 2" across, wide funnel-shaped, yellow throat,
solitary or in terminal clusters; April - September

Fruit inconspicuous, tiny achene

Propagation: semi-hardwood/softwood cuttings

Usage: small filler for attractive flower display and grayish
foliage; informal landscapes; rock gardens; perennial borders

Landscape Care:

Watering occasional - avoid excessive watering - drought tolerant
after established

Fertilizing little required

Pruning head back occasionally to encourage dense growth

Pests/Diseases relatively free; root rot in poorly drained soils

Special Conditions

Origin: S. Europe Family: Convolvulaceae
