

Botanical Name: Erigeron glaucus 'Wayne Roderick'

Common Name: Beach aster, Seaside daisy

Type of Plant: dicot: perennial Family Asteraceae

Habit of Growth:

Overall Shape low, sprawling, cushion-shaped plant with a dense structure;
foliage forms tight rosettes topped by lavender daisy flowers

Height to 8" Spread to 18" Growth Rate rapid

Environment:

Exposure outdoors full sun to partial shade

Soil tolerates most any soil; prefers good drainage

Hardiness Hardy - Zones 4-6, 15-17, 22-24

Morphology:

Leaves spatulate, to 3" long with long winged petioles; arranged in
terminal rosettes at the ends of short branches

Flowers head inflorescences, to 1-1/2" across, lavender color with
yellow centers; blooms throughout the year

Fruit tiny achenes;

Propagation: herbaceous cuttings

Usage: groundcover in beds, also used trailing from hanging baskets;
good groundcover in seaside and cottage gardens invasive; blends well into many
garden styles and themes; not invasive

Landscape Care:

Watering takes average watering

Fertilizing none needed

Pruning very little needed; dead-head as needed

Pests/Diseases root rot where drainage is poor

Other _____

Origin: Coastal California and Oregon
