

Botanical Name: Heuchera x brizoides 'Bressingham Hybrid'

Common Name: Coral bells (hybrid varieties)

Type of Plant: dicot: perennial Family Saxifragaceae

Habit of Growth:

Overall Shape low, clumping plant with a thick basal stem; flowers are
carried high above foliage on thin scapes

Height to 2 ft. Spread to 2 ft. Growth Rate moderate

Environment:

Exposure outdoor partial shade preferred, can tolerate full sun at coast

Soil prefers a moist, acidic loamy soil

Hardiness hardy (Zones 1-10, 12-24)

Morphology:

Leaves palmate, arising from a clump, with oval to rounded leaves
which have somewhat crenate margins; petioles long, slightly hairy

Flowers pink, white or red, bell-shaped on slender wiry stems;
flowers are about 1/4" across, usually in panicles

Fruit small rounded capsule

Propagation: seed, division

Usage: excellent facer in temperate climate landscapes, perennial
borders and under trees; can be used as a groundcover mixed with ferns, bulbs
or other perennials

Landscape Care:

Watering prefers regular watering, but can tolerate some drought
if grown in shade

Fertilizing slow-release in spring

Pruning remove dead leaves and flowers after bloom

Pests/Diseases snails and slugs

Other

Origin: hybrids, parent strains from southwest North America
